

1. ARRAYS

7	8	6	5	4	3
[0]	[1]	[2]	[3]	[4]	[5]

↖ X "a"

- Array can store data of specified type
- each element has unique index in Array
- elements are stored contiguous in memory
- the size of array is predefined and cannot be modified

Types

one dimensional: an array with a bunch of values having been declared with single index.

$a[i] \rightarrow i$ between 0 and $n-1$

1	2	3	4	5	6	7	8
---	---	---	---	---	---	---	---

two dimensional: an array with a bunch of values having been declared with double index.

$a[i][j] \rightarrow i$ and j between 0 and n

i ↓ j →	0	1	2	3
0				
1				
2				

Arrays in memory

3-D Array

same as 1-D Array

Creating an Array

- ① declare - creates a reference to array
- ② instantiation of an array - creates an array
- ③ initialization - assigns value to cells in array

memory

xx10 references to array and store base address of array to qress, not to change the base addresses we start adding from 0 index.

Syntax in Java

1. `dataType [] arr`
2. `arr = new dataType[]`
3. `arr[0] = 2, arr[1] = 8`

illustrated in code in pc.

1-D Array

Insertion in Array

code of implementation in pc.

Time complexity = $O(1)$

Accessing Array Element

$O(1)$ → time complexity

$O(1)$ → space complexity

Traversal

$O(N)$ → time complexity

Searching: $O(N)$ → time complexity

$O(1)$ → time complexity

Delete

$O(1)$ → space complexity

Summary

Operation

1. creating an empty array
2. inserting a value in array
3. traversing a given array
4. Accessing a given cell
5. searching a given value
6. deleting a given value

Time complexity

$O(1)$

$O(1)$

$O(N)$

$O(1)$

$O(N)$

$O(1)$

space complexity

$O(N)$

$O(1)$

$O(1)$

$O(1)$

$O(1)$

$O(1)$

$O(1)$

Syntax for 2-D array

→ declare, instantiation, initialization

`dataType [][] arrayName = new dataType [size][size]`

Summary

operation

creating an empty array
 Inserting a value in array
 Traversing a given array
 Accessing a given cell
 searching a given value
 deleting a given value

Time complexity

$O(1)$

$O(1)$

$O(mn)$

$O(1)$

$O(mn)$

$O(1)$

Space complexity

$O(mn)$

$O(1)$

$O(1)$

$O(1)$

$O(1)$

$O(1)$

All the above operation is tested and illustrated on PC.

when to use / Avoid Array

Use:

- To store multiple variables of same data type
- Random access

Avoid:

- same data type element
- Reverse memory.
